

## ETF & Mutual Fund Rankings: Large Cap Growth Style

The Large Cap Growth style ranks fourth out of the twelve fund styles as detailed in our [3Q16 Style Ratings for ETFs and Mutual Funds](#) report. Last quarter, the Large Cap Growth style ranked sixth. It gets our Neutral rating, which is based on an aggregation of ratings of 17 ETFs and 666 mutual funds in the Large Cap Growth style as of July 28, 2016. See a recap of our [2Q16 Style Ratings here](#).

Figures 1 and 2 show the five best and worst rated ETFs and mutual funds in the style. Not all Large Cap Growth style ETFs and mutual funds are created the same. The number of holdings varies widely (from 17 to 671). This variation creates drastically different investment implications and, therefore, ratings.

Investors seeking exposure to the Large Cap Growth style should buy one of the Attractive-or-better rated ETFs or mutual funds from Figures 1 and 2.

Nuveen Growth Fund (NSRGX, NBGRX, NSRCX) and Destra Focused Equity Fund (DFOIX, DFOCX) are excluded from Figure 2 because their total net assets (TNA) are below \$100 million and do not meet our liquidity minimums.

iShares Edge MSCI USA Quality Factor ETF (QUAL) is the top-rated Large Cap Growth ETF and City National Rochdale US Core Equity Fund (CNRUX) is the top-rated Large Cap Growth mutual fund. Both earn a Very Attractive rating.

ETFS Diversified-Factor US Large Cap Index Fund (SBUS) is the worst rated Large Cap Growth ETF and PACE Large Co Growth Equity Investments (PLAAX) is the worst rated Large Cap Growth mutual fund. SBUS earns a Neutral rating and PLAAX earns a Very Dangerous rating.

Alliance Data Systems Corp (ADS: \$233/share) is one of our favorite stocks held by Large Cap Growth ETFs and mutual funds and earns an Attractive rating. Over the last decade, ADS has grown after-tax profit ([NOPAT](#)) by 19% compounded annually to \$917 million in 2015. NOPAT has increased to \$1.3 billion over the last twelve months. The company has improved its return on invested capital ([ROIC](#)) from 9% in 2005 to 12% over the last twelve months. Despite the improving fundamentals, the market has failed to value ADS fairly. At its current price of \$233/share, ADS has a price-to-economic book value ([PEBV](#)) ratio of 1.0. This ratio means that the market expects ADS' NOPAT to never meaningfully grow from current levels. If ADS can [grow NOPAT by just 9% compounded annually for the next decade](#), the stock is worth \$296/share today – a 27% upside.

Workday (WDAY: \$80/share) is one of our least favorite stocks held by Large Cap Growth ETFs and mutual funds and earns a Dangerous rating. WDAY landed in the [Danger Zone in April 2014](#) and business operations have not improved since. WDAY's NOPAT has declined from -\$105 million in 2013 to -\$254 million in 2016, or -34% compounded annually. The company's ROIC has not improved since 2013 and is still a bottom-quintile -14% over the last twelve months. Despite the clear deterioration in fundamentals, the stock remains up over 47% since its IPO in 2013, which has left shares greatly overvalued. To justify its current price of \$80/share, WDAY must immediately achieve pre-tax margins of 10% (quite a jump from its current -21% over TTM) and [grow revenue by 26% compounded annually for the next 16 years](#). In this scenario, WDAY would be generating over \$46 billion in revenue in 16 years, or nearly equal to tech giant Cisco's 2015 revenue.

Figures 3 and 4 show the rating landscape of all Large Cap Growth ETFs and mutual funds.

## ***New Constructs® – Profile***

### ***How New Constructs Creates Value for Clients***

We find it. You benefit. Cutting-edge technology enables us to scale our [forensic accounting expertise](#) across 3000+ stocks. We shine a light in the dark corners of SEC filings so our clients can make safer, more informed decisions.

Our [stock rating methodology](#) instantly informs you of the quality of the business and the fairness of the stock's valuation. We do the diligence on earnings quality and valuation so you don't have to.

In-depth risk/reward analysis underpins our ratings. Our rating methodology grades every stock, ETF, and mutual fund according to what we believe are the 5 most important criteria for assessing the quality of an equity. Each grade reflects the balance of potential risk and reward of buying that equity. Our analysis results in the 5 ratings described below. Very Attractive and Attractive correspond to a "Buy" rating, Very Dangerous and Dangerous correspond to a "Sell" rating, while Neutral corresponds to a "Hold" rating.

QUESTION: Why shouldn't fund research be as good as stock research? Why should fund investors rely on backward-looking price trends?

ANSWER: They should not.

Don't judge a fund by its cover. Take a look inside at its holdings and understand the quality of earnings and valuation of the stocks it holds. We enable you to choose the best fund based on its stock-picking merits so you do not have to rely solely on backward-looking technical metrics.

The drivers of our [forward-looking fund ratings](#) are Portfolio Management (i.e. the aggregated ratings of its holdings) and Total Annual Costs. The Total Annual Costs Rating ([details here](#)) captures the all-in cost of being in a fund over a 3-year holding period, the average period for all fund investors.

### ***Our Philosophy About Research***

Accounting data is not designed for equity investors, but for debt investors. [Accounting data must be translated into economic earnings](#) to understand the profitability and valuation relevant to equity investors. Respected investors (e.g. Adam Smith, Warren Buffett and Ben Graham) have repeatedly emphasized that accounting results should not be used to value stocks. [Economic earnings](#) are what matter because they are:

1. Based on the complete set of financial information available.
2. Standard for all companies.
3. A more accurate representation of the true underlying cash flows of the business.

### ***Additional Information***

Incorporated in July 2002, [New Constructs](#) is an independent publisher of investment research that provides clients with consulting and research services. We specialize in quality-of-earnings, forensic accounting and discounted cash flow valuation analyses for all U.S. public companies. We translate accounting data from 10Ks into economic financial statements, i.e. [NOPAT](#), [Invested Capital](#), and [WACC](#), to create [economic earnings models](#), which are necessary to understand the true profitability and valuation of companies. Visit the [Free Archive](#) to download samples of our research. New Constructs is a [BBB accredited](#) business and a member of the [Investorside Research Association](#).
