

1Q22 Earnings Shows Coinbase's Struggles

With Coinbase (COIN) down 77% year-to-date (YTD) and 85% since we first put the company in the Danger Zone in [March 2021](#), investors might be thinking now is the time to get shares at a discount. Think again. Coinbase's 1Q22 results and guidance do not bode well for the future, and we think shares are worth as little as \$17/share even with optimistic assumptions for long-term margins and revenue growth.

This report leverages our cutting-edge [Robo-Analyst technology](#) to deliver [proven-superior](#)¹ fundamental research and support more cost-effective fulfillment of the [fiduciary duty of care](#).

Learn more about the best fundamental research

Sources: New Constructs, LLC and company filings

Weakness in 1Q22 a Sign of Things To Come

As noted in our prior update in [March 2022](#), the growth and profitability achieved by Coinbase in 2021 was unsustainable – 1Q22 proved as much. In the quarter Coinbase's:

- net operating profit after-tax ([NOPAT](#)) margin fell to -19%, down from 43% in 1Q21
- [invested capital turns](#) fell from to 0.4, down from 1.4 in 1Q21
- return on invested capital ([ROIC](#)) fell to -7%, down from 58% in 1Q21
- free cash flow ([FCF](#)) was -\$1.4 billion, compared to \$969 million in FCF in 2021.

Coinbase's own preferred metrics were weak as well:

- trading volume reached its lowest level of the past five quarters
- monthly transacting users (MTUs) fell 19% quarter-over-quarter

¹ Our research utilizes our [Core Earnings](#), a more reliable measure of profits, as proven in [Core Earnings: New Data & Evidence](#), written by professors at Harvard Business School (HBS) & MIT Sloan and published in [The Journal of Financial Economics](#).

- average transaction revenue per user (ATRPV) was \$35 in 1Q22, down from \$64 in 2021, \$45 in 2020, and slightly above \$34 in 2019.

Guidance Is No Better

Going forward, we expect Coinbase's margins and revenue growth rates to decline as competition increasingly eats into its business. Increased volatility, or further downward movement, in the crypto market could also spook retail investors after big losses so far this year.

Management's 2022 guidance does little to assuage the concerns that the business is headed the wrong direction. Guidance shows:

- MTUs is expected to be lower in 2Q22 than 1Q22
- total trading volume expected to be lower in 2Q22 than 1Q22
- expected range for MTUs in 2022 anywhere from 5 to 15 million, not exactly a precise estimate
- ATRPV in 2022 is expected to return to "pre-2021" levels, which certainly implies a decline

In the [1Q22 earnings call](#), management also noted that their goal "is to roughly operate the company as breakeven, smoothed out over time for the time being". In other words, the record profitability of 2021 is in the rearview.

Don't Ignore New Bankruptcy & Regulatory Risk

As noted in Coinbase's latest [10-Q](#), the company has to address the real risk of bankruptcy. The following statement was added this quarter:

"in the event of a bankruptcy, the crypto assets we hold in custody on behalf of our customers could be subject to bankruptcy proceedings and such customers could be treated as our general unsecured creditors."

This public acknowledgement could spark fear in the company's clients. The fear of bankruptcy proceedings could drive clients to cash out their investments as quickly as possible, further weakening Coinbase's business, and bringing the company even closer to bankruptcy.

As cryptocurrency rose in popularity among investors, regulations have increased as well. The [infrastructure bill passed last year](#) contains provisions increasing the requirements for cryptocurrency tax reporting, and we expect that is just the beginning. Additional regulations could diminish the popularity of cryptocurrency as an asset class and negatively impact Coinbase's growth trajectory.

Coinbase Is Priced to Be Bigger Than the Largest Exchanges in the World

Despite COIN falling 85% since the opening price on its IPO date, the stock is still significantly overvalued. Below, we use our [reverse discounted cash flow \(DCF\) model](#) to illustrate the lofty expectations for future cash flows implied by Coinbase's current valuation.

To justify its current price of ~\$60/share, Coinbase must:

- achieve a 6% NOPAT margin (half of Fidelity National Info Services TTM margin), over the long term (from 2022-2031) despite consensus for negative earnings in 2022 and management's goal of "breakeven" operations and
- grow revenue by 25% compounded annually through 2031 (compared to consensus estimates of 4% CAGR from 2021-2024)

In this [scenario](#), Coinbase would earn \$73 billion in revenue by 2031, which is greater than the combined TTM revenue of the 10 largest Financial & Commodity Market Operators² plus Charles Schwab (SCHW) and Robinhood (HOOD). Coinbase would also earn \$4.1 billion in NOPAT in 2031, which would rank second, behind only Charles Schwab, in the group of companies noted in the revenue comparison.

Given management's goal to operate the business at "breakeven" for "the time being", even a 6% NOPAT margin may be optimistic.

² Companies in this group include Cboe Global Markets (CBOE), CME Group (CME), Deutsche Boerse AG (DBOEF), Fidelity National Information Services (FIS), Interactive Brokers Group (IBKR), Intercontinental Exchange (ICE), MarketAxess Holdings (MKTX), Nasdaq Inc. (NDAQ), Tradeweb Markets (TW), and Virtu Financial (VIRT).

71% Downside Even if Consensus Is Right

We review an additional DCF scenario to highlight the downside risk in Coinbase even if the company grows at consensus rates and gradually improves its margins from negative 19% in 1Q22 to 6% long-term.

If we assume Coinbase's:

- NOPAT margin equals 1% in 2022 (just above breakeven) and improves to 6% by 2027,
- revenue grows at consensus rates in 2022, 2023, and 2024 (-37%, 54%, and 14%³), and
- revenue grows by 10% compounded annually from 2025-2031, then

COIN is worth just [\\$17/share today](#) – a 71% downside.

A 6% margin over the long-term may prove optimistic for a few reasons. First, Coinbase plans to increase hiring, expand internationally, and greatly increase its technology and general and administrative expenses in the near-term.

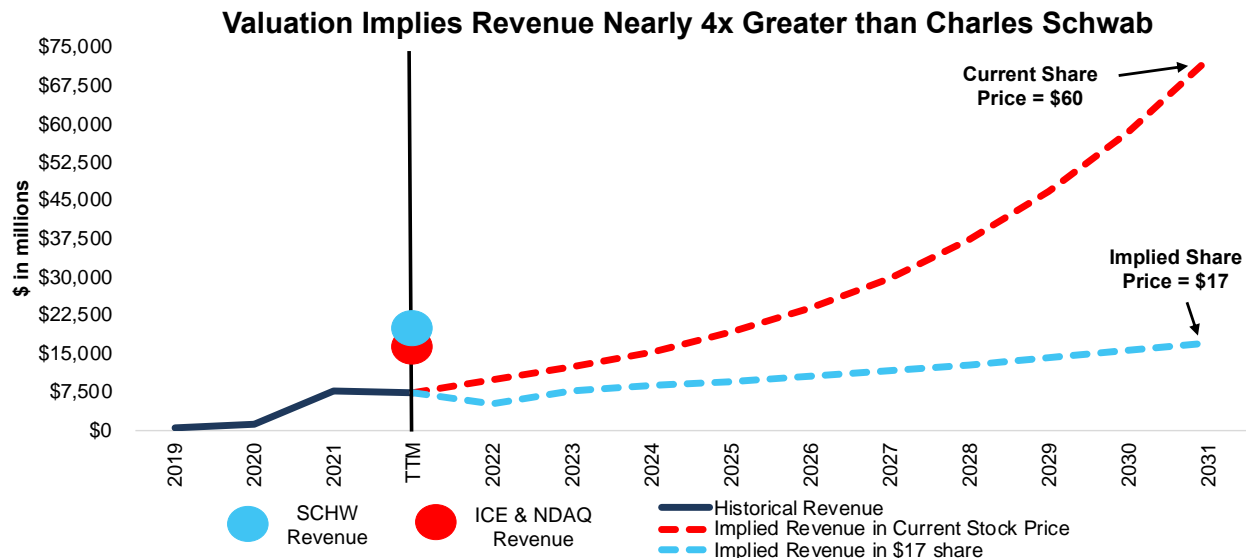

Second, as we've noted in the past, competition looms large, and can eat away at any opportunity for outsized margins (i.e. [race to zero fees](#)) given Coinbase's reliance upon transaction fees for the majority of its revenue. Traditional exchange operators, brokers, and payment companies such as PayPal (PYPL) or Block (SQ) could see Coinbase's weakness a chance to take market share and limit Coinbase's long-term profit potential.

Third, it is unlikely Coinbase can simply stop spending to again achieve its high profitability of 2021, at least over the long-term. Coinbase must continually spend on marketing and advertising, not just to promote its product, but also to convince new users of crypto's underlying usefulness.

Stock exchange operators don't have this problem (or expense), because despite criticisms, the stock market and its derivatives are widely accepted forms of financial value and provide tangible uses such as risk management, raising of capital, etc. Crypto on the other hand faces criticism and questions about its use at every turn, which Coinbase must dispel, at no small cost.

Figure 2 compares Coinbase's implied future revenue in the scenarios above to its historical revenue as well as Charles Schwab's 2021 revenue and the combined 2021 revenues of Intercontinental Exchange and Nasdaq.

Figure 2: Coinbase's Historical and Implied Revenue: DCF Valuation Scenarios

Sources: New Constructs, LLC and company filings

Each of the above scenarios also assumes Coinbase's change in invested capital equals 10% of revenue in each year. This growth in invested capital is under half the change in invested capital as a percent of revenue in

³ Consensus estimates based on seven analyst estimates in 2022, 24 in 2023 and 14 analyst estimates in 2024.

both 2020 and 2021. If we assume Coinbase's invested capital increases at a similar rate to 2020 and 2021, the downside risk is even larger.

Selling for Cash on Hand Could be Best Case Scenario

As Coinbase continues to heavily spend on expanding its platform and keeping up with the latest developments in the crypto market, investors may see lasting profits as a faraway dream, rather than a medium-term reality. In such a scenario, the best-case scenario (rather than spending money on a money-losing business) could be to sell the business for the value of its cash net of liabilities, or \$1.0 billion. However, even this scenario is a bit of a moving target, given that Coinbase burned \$1.4 billion in cash in 1Q22 alone. With that said, the value of Coinbase's net cash as of 1Q22 is \$5/share.

Worse yet, if potential investors or suitors see the company's ability to maintain as a "going-concern" as tenuous, which would be likely in such a scenario, they could push for a lower price or even be scared off by concerns about lawsuits.

Looking Beyond the Current Rating

Coinbase's record profitability in 2021 drives our [Robo-Analyst](#) rating on the stock to Attractive. However, 1Q22 results and management guidance reveal that the financial performance of the business in 2021 is not sustainable and that profits are going to be much lower in the medium and long term. Our human analysts' view is that the stock holds worse risk/reward than its current Robo-Analyst rating suggests. Looking forward, we expect the company's profitability to diminish as expenses rise and growth slows with crypto adoption losing momentum and regulations rising. Should the company's performance follow our expectation, its Robo-Analyst stock rating will be downgraded soon as its record 2021 results slide further and further into the past.

It's Official: We Offer the Best Fundamental Data in the World

Many firms claim their research is superior, but none of them can prove it with independent studies from highly-respected institutions as we can. Three different papers from both the public and private sectors show:

1. Legacy fundamental datasets suffer from significant inaccuracies, omissions and biases.
2. Only our “novel database” enables investors to overcome these flaws and apply [reliable](#) fundamental data in their research.
3. Our proprietary measures of [Core Earnings](#) and [Earnings Distortion](#) materially improve stock picking and forecasting of profits.

Best Fundamental Data in the World

Forthcoming in [The Journal of Financial Economics](#), a top peer-reviewed journal, [Core Earnings: New Data & Evidence](#) proves our Robo-Analyst technology overcomes material shortcomings in legacy firms’ data collection processes to provide superior [fundamental data](#), [earnings](#) models, and [research](#). More [details](#).

Key quotes from the paper:

- “[New Constructs’] *Total Adjustments* differs significantly from the items identified and excluded from Compustat’s adjusted earnings measures. For example... 50% to 70% of the variation in *Total Adjustments* is not explained by S&P Global’s (SPGI) *Adjustments* individually.” – pp. 14, 1st para.
- “A final source of differences [between New Constructs’ and S&P Global’s data] is due to data collection oversights...we identified cases where Compustat did not collect information relating to firms’ income that is useful in assessing core earnings.” – pp. 16, 2nd para.

Superior Models

A top accounting firm features the superiority of our ROIC, NOPAT and Invested Capital research to Capital IQ & Bloomberg’s in [Getting ROIC Right](#). See the [Appendix](#) for direct comparison details.

Key quotes from the paper:

- “...an accurate calculation of ROIC requires more diligence than often occurs in some of the common, off-the-shelf ROIC calculations. Only by scouring the footnotes and the MD&A [as New Constructs does] can investors get an accurate calculation of ROIC.” – pp. 8, 5th para.
- “The majority of the difference...comes from New Constructs’ machine learning approach, which leverages technology to calculate ROIC by applying accounting adjustments that may be buried deeply in the footnotes across thousands of companies.” – pp. 4, 2nd para.

Superior Stock Ratings

Robo-Analysts’ stock ratings outperform those from human analysts as shown in this [paper](#) from Indiana’s Kelley School of Business. Bloomberg features the paper [here](#).

Key quotes from the paper:

- “the portfolios formed following the buy recommendations of Robo-Analysts earn abnormal returns that are statistically and economically significant.” – pp. 6, 3rd para.
- “Our results ultimately suggest that Robo-Analysts are a valuable, alternative information intermediary to traditional sell-side analysts.” – pp. 20, 3rd para.

Our mission is to provide the best fundamental analysis of public and private businesses in the world and make it affordable for all investors, not just Wall Street insiders.

We believe every investor deserves to know the whole truth about the profitability and valuation of any company they consider for investment. More details on our cutting-edge technology and how we use it are [here](#).
