

## All Cap Index & Sectors: Price-to-Economic Book Value Ratio Flat in 2Q23 (Free, Abridged)

The trailing-twelve-months (TTM) PEBV ratio for the NC 2000 did not change much from 6/30/23 to 8/15/23.

This report is a free and abridged version of [All Cap Index & Sectors: Price-to-Economic Book Value Ratio Flat in 2Q23](#), one of our quarterly reports on [fundamental market and sector trends](#). The full reports are available to our [Professional](#) and [Institutional](#) members or can be purchased below.

The full version of this report analyzes<sup>1,2</sup> the trailing PEBV ratio for the NC 2000<sup>3</sup>, our All Cap Index, and its sectors (last quarter's analysis is [here](#)) over the last twenty years.

This report leverages our cutting-edge [Robo-Analyst technology](#) to deliver [proven-superior](#)<sup>4</sup> fundamental research and support more cost-effective fulfillment of the [fiduciary duty of care](#).

[Buy the Full Version of This Report](#)

### NC 2000 Trailing PEBV Ratio Remained Flat from 6/30/23 to 8/15/23

The trailing PEBV ratio compares the NC 2000's expected future profits (as reflected in its price) to its economic book value as of 8/15/23. The NC 2000's current PEBV ratio implies the profits ([NOPAT](#)) of its constituents will increase dramatically from the TTM ended 2Q23 NOPAT levels.

See Figure 1 in the [full version](#) of our report for the chart of the NC 2000 PEBV Ratio from December 1998 through 8/15/23 as well as charts for the PEBV for every sector.

### Key Details on Select NC 2000 Sectors

Only the Energy sector trades below its economic book value. The Energy sector has the lowest trailing PEBV ratio among the eleven All Cap Index sectors based on prices as of 8/15/23 and financial data from 2Q23 10-Qs.

A trailing PEBV ratio of 0.7 means the market expects the Energy sector's profits to decline by 30% from TTM ended 2Q23 levels. On the flip side, investors expect the Utilities and Real Estate sectors to improve profits more than any other NC 2000 sectors.

Below, we highlight the Basic Materials sector. Note that the full version of this report has analysis and charts like the following for every sector.

### Sample Sector Analysis<sup>5</sup>: Basic Materials: Trailing PEBV Ratio = 1.8

Figure 1 shows the trailing PEBV ratio for the Basic Materials sector rose from 1.5 as of 6/30/23 to 1.8 as of 8/15/23. The Basic Materials sector's market cap fell from \$1.23 trillion as of 6/30/23 to \$1.22 trillion as of 8/15/23, while its economic book value fell from \$812.5 billion as of 6/30/23 to \$688.6 billion as of 8/15/23.

<sup>1</sup> We calculate these metrics based on [S&P Global's](#) (SPGI) methodology, which sums individual NC 2000 constituent values for market cap and economic book value before using them to calculate the metrics. We call this the "Aggregate" methodology. Get more details in Appendices I and II.

<sup>2</sup> Based on latest available audited financial data, which is the 2Q23 10-Q in most cases. Price data is as of 8/15/23. See the appendices for more information calculation methodologies.

<sup>3</sup> The NC 2000 consists of the largest 2000 U.S. companies by market cap in our coverage. Constituents are updated on a quarterly basis. We exclude companies that report under IFRS and non-U.S. ADR companies.

<sup>4</sup> Our research utilizes our [Core Earnings](#), a more reliable measure of profits, as proven in [Core Earnings: New Data & Evidence](#), written by professors at Harvard Business School (HBS) & MIT Sloan and published in [The Journal of Financial Economics](#).

<sup>5</sup> The full version of this report provides analyses for all eleven sectors.

**Figure 1: Basic Materials Trailing PEBV Ratio: December 1998 – 8/15/23**

Sources: New Constructs, LLC and company filings.  
 The August 15, 2023 measurement period uses price data as of that date and incorporates the financial data from 2Q23 10-Qs, as this is the earliest date for which all of the 2Q23 10-Qs for the NC 2000 constituents were available.

Figure 2 compares the trends for market cap and economic book value for the Basic Materials sector since 1998. We sum up the individual NC 2000/sector constituent values for market cap and economic book value. We call this approach the “Aggregate” methodology, and it matches S&P Global’s (SPGI) methodology for these calculations.

**Figure 2: Basic Materials Market Cap & Economic Book Value: December 1998 – 8/15/23**

Sources: New Constructs, LLC and company filings.  
 The August 15, 2023 measurement period uses price data as of that date and incorporates the financial data from 2Q23 10-Qs, as this is the earliest date for which all of the 2Q23 10-Qs for the NC 2000 constituents were available.

The Aggregate methodology provides a straightforward look at the entire NC 2000/sector, regardless of firm size or index weighting, and matches how S&P Global (SPGI) calculates metrics for the S&P 500.

For additional perspective, we compare the Aggregate method for trailing PEBV ratio with two other market-weighted methodologies. Each method has its pros and cons, which are detailed in the Appendix.

Figure 3 compares these three methods for calculating the Basic Materials sector’s trailing PEBV ratios.

## ***Appendix: Analyzing Trailing PEBV Ratio with Different Weighting Methodologies***

---

We derive the metrics above by summing the individual NC 2000/sector constituent values for market cap and economic book value to calculate trailing PEBV ratio. We call this approach the “Aggregate” methodology.

The Aggregate methodology provides a straightforward look at the entire NC 2000/sector, regardless of firm size or index weighting, and matches how S&P Global (SPGI) calculates metrics for the S&P 500.

For additional perspective, we compare the Aggregate method for trailing PEBV ratio with two other market-weighted methodologies. These market-weighted methodologies add more value for ratios that do not include market values, e.g. ROIC and its drivers, but we include them here, nonetheless, for comparison:

1. **Market-weighted metrics** – calculated by market-cap-weighting the trailing PEBV ratio for the individual companies relative to their sector or the overall NC 2000 in each period. Details:
  - a. Company weight equals the company’s market cap divided by the market cap of the NC 2000 or its sector
  - b. We multiply each company’s trailing PEBV ratio by its weight
  - c. NC 2000/Sector trailing PEBV ratio equals the sum of the weighted trailing PEBV ratios for all the companies in the NC 2000/sector
2. **Market-weighted drivers** – calculated by market-cap-weighting the market cap and economic book value for the individual companies in each sector in each period. Details:
  - a. Company weight equals the company’s market cap divided by the market cap of the NC 2000 or its sector
  - b. We multiply each company’s market cap and economic book value by its weight
  - c. We sum the weighted market cap and weighted economic book value for each company in the NC 2000/each sector to determine the NC 2000 or sector’s weighted market cap and weighted economic book value
  - d. NC 2000/Sector trailing PEBV ratio equals weighted NC 2000/sector market cap divided by weighted NC 2000/sector economic book value

Each methodology has its pros and cons, as outlined below:

### **Aggregate method**

Pros:

- A straightforward look at the entire NC 2000/sector, regardless of company size or weighting.
- Matches how S&P Global calculates metrics for the S&P 500.

Cons:

- Vulnerable to impact of companies entering/exiting the group of companies, which could unduly affect aggregate values. Also susceptible to outliers in any one period.

### **Market-weighted metrics method**

Pros:

- Accounts for a firm’s market cap relative to the NC 2000/sector and weights its metrics accordingly.

Cons:

- Vulnerable to outlier results from a single company disproportionately impacting the overall trailing PEBV ratio.

### **Market-weighted drivers method**

Pros:

- Accounts for a firm’s market cap relative to the NC 2000/sector and weights its size and economic book value accordingly.
- Mitigates the disproportionate impact of outlier results from one company on the overall results.

Cons:

- More susceptible to large swings in market cap or economic book value (which can be impacted by changes in WACC) period over period, particularly from firms with a large weighting in the NC 2000/Sector.

## ***It's Official: We Offer the Best Fundamental Data in the World***

---

Many firms claim their research is superior, but none of them can prove it with independent studies from highly-respected institutions as we can. Three different papers from both the public and private sectors show:

1. Legacy fundamental datasets suffer from significant inaccuracies, omissions and biases.
2. Only our “novel database” enables investors to overcome these flaws and apply [reliable](#) fundamental data in their research.
3. Our proprietary measures of [Core Earnings](#) and [Earnings Distortion](#) materially improve stock picking and forecasting of profits.

### **Best Fundamental Data in the World**

Forthcoming in [The Journal of Financial Economics](#), a top peer-reviewed journal, [Core Earnings: New Data & Evidence](#) proves our Robo-Analyst technology overcomes material shortcomings in legacy firms’ data collection processes to provide superior [fundamental data](#), [earnings](#) models, and [research](#). More [details](#).

Key quotes from the paper:

- “[New Constructs’] *Total Adjustments* differs significantly from the items identified and excluded from Compustat’s adjusted earnings measures. For example... 50% to 70% of the variation in *Total Adjustments* is not explained by *S&P Global’s (SPGI) Adjustments* individually.” – pp. 14, 1<sup>st</sup> para.
- “A final source of differences [between New Constructs’ and S&P Global’s data] is due to data collection oversights...we identified cases where Compustat did not collect information relating to firms’ income that is useful in assessing core earnings.” – pp. 16, 2<sup>nd</sup> para.

### **Superior Models**

A top accounting firm features the superiority of our ROIC, NOPAT and Invested Capital research to Capital IQ & Bloomberg’s in [Getting ROIC Right](#). See the [Appendix](#) for direct comparison details.

Key quotes from the paper:

- “...an accurate calculation of ROIC requires more diligence than often occurs in some of the common, off-the-shelf ROIC calculations. Only by scouring the footnotes and the MD&A [ as New Constructs does] can investors get an accurate calculation of ROIC.” – pp. 8, 5<sup>th</sup> para.
- “The majority of the difference...comes from New Constructs’ machine learning approach, which leverages technology to calculate ROIC by applying accounting adjustments that may be buried deeply in the footnotes across thousands of companies.” – pp. 4, 2<sup>nd</sup> para.

### **Superior Stock Ratings**

Robo-Analysts’ stock ratings outperform those from human analysts as shown in this [paper](#) from Indiana’s Kelley School of Business. Bloomberg features the paper [here](#).

Key quotes from the paper:

- “the portfolios formed following the buy recommendations of Robo-Analysts earn abnormal returns that are statistically and economically significant.” – pp. 6, 3<sup>rd</sup> para.
- “Our results ultimately suggest that Robo-Analysts are a valuable, alternative information intermediary to traditional sell-side analysts.” – pp. 20, 3<sup>rd</sup> para.

Our mission is to provide the best fundamental analysis of public and private businesses in the world and make it affordable for all investors, not just Wall Street insiders.

We believe every investor deserves to know the whole truth about the profitability and valuation of any company they consider for investment. More details on our cutting-edge technology and how we use it are [here](#).

## ***DISCLOSURES***

New Constructs®, LLC (together with any subsidiaries and/or affiliates, "New Constructs") is an independent organization with no management ties to the companies it covers. None of the members of New Constructs' management team or the management team of any New Constructs' affiliate holds a seat on the Board of Directors of any of the companies New Constructs covers. New Constructs does not perform any investment or merchant banking functions and does not operate a trading desk.

New Constructs' Stock Ownership Policy prevents any of its employees or managers from engaging in Insider Trading and restricts any trading whereby an employee may exploit inside information regarding our stock research. In addition, employees and managers of the company are bound by a code of ethics that restricts them from purchasing or selling a security that they know or should have known was under consideration for inclusion in a New Constructs report nor may they purchase or sell a security for the first two days after New Constructs issues a report on that security.
